SKILLS

Languages

Python Bash SQL

AI / ML

RAG LLM Llama 3

Groq LangChain NLP

Function Calling Qdrant

Backend

FastAPI Django REST API

PostgreSQL MongoDB

DevOps & Tools

Docker Git Ansible

Terraform Linux

EDUCATION

Astana IT University

B.S. Software Engineering -
Expected 2027

Samsung Innovation Campus

Python & Big Data Analytics - Top-
15 in Kazakhstan, 2024

AI/ML & Backend Engineer specializing in autonomous AI systems, not just code. Architected and deployed production-grade LLM integrations -RAG pipelines, function-calling agents, and vector-search infrastructure - embedded into real business workflows. Proven track record shipping asynchronous, high-load backend services from architecture to deployment.

EXPERIENCE

AI/ML & Backend Engineer

2024 — Present

Project-Based / Freelance

- Architected and deployed end-to-end AI assistants leveraging RAG and LLM pipelines for enterprise-grade information retrieval.
- Engineered vector search infrastructure using Qdrant, implementing embedding generation and semantic search for unstructured document corpora.
- Developed asynchronous microservices in Python (FastAPI), optimizing for concurrency and low-latency response under load.
- Containerized microservices with Docker and provisioned infrastructure using Terraform and Ansible, streamlining deployment pipelines.

Junior Developer

2024 (2 months)

Otbasy Bank

- Architected and developed a corporate employee directory system on Django, optimizing the underlying database schema for query performance.
- Designed and deployed an internal RAG-based AI assistant enabling intelligent semantic search across internal regulations and policy documents.

PROJECTS

Corporate RAG Assistant (MVP)

Python · FastAPI · Qdrant · LLM (Llama 3 / Groq) · Docker

Engineered a microservice for enterprise document search, implementing secure API key management via environment variables, in-memory vector indexing, and cosine-similarity ranking for relevant results.

AI Beauty Admin - B2B Micro-SaaS

Telegram API · LLM Function Calling · NLP · PostgreSQL

Built an autonomous AI agent for the beauty industry capable of parsing natural-language client requests, consulting a RAG-powered pricing knowledge base, and autonomously booking appointment slots via function calling against a live database.

Quiz Platform

Go · Python · PostgreSQL · JWT

Engineered a high-load backend with secure JWT-based authentication, designing a REST API and relational database schema to support concurrent user sessions at scale.
